Part II Organizational Action Attach additional statements if needed. See back of form for additional questions.

14 Describe the organizational action and, if applicable, the date of the action or the date against which shareholders' ownership is measured for the action ▶ On June 13, 2019, the board of directors of Anworth Mortgage Asset Corporation (Anworth) declared a quarterly common stock dividend which is payable on July 29, 2019 to holders of record of common stock as of the close of business on June 28, 2019. As a result of this cash dividend to common stockholders, effective July 1, 2019, the Conversion Rate at which each share of Series B Cumulative Convertible Preferred Stock (Series B) can be converted into common shares was increased. The value of the Conversion Rate increase is a deemed distribution for tax purposes.

15 Describe the quantitative effect of the organizational action on the basis of the security in the hands of a U.S. taxpayer as an adjustment per share or as a percentage of old basis ▶ The Conversion Rate increased from 5.3539 shares of Anworth's common stock to 5.4397 shares of Anworth's common stock for each Series B share. The value of the increase is \$0.003884 per Series B share. To the extent supported by Earnings & Profits, the \$0.003884 per share is taxable to Series B holders and increases the tax basis in their Series B stock. The \$0.003884 per share will be taxable in 2019.

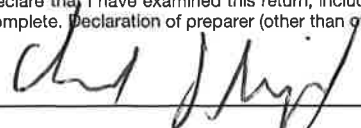

16 Describe the calculation of the change in basis and the data that supports the calculation, such as the market values of securities and the valuation dates ▶ When Anworth pays a cash dividend during any fiscal period to its common stockholders in an amount that results in an annualized common stock dividend yield greater than 6.25% (the dividend yield on the Series B stock), the Conversion Rate on the Series B stock is adjusted based on a formula specified in "Articles Supplementary Establishing and Fixing Certain Rights and Preferences of the Series B Preferred Stock." This adjustment calculation for July 1, 2019 was published on Anworth's public website and is attached to this Form 8937. The value of the Conversion Rate adjustment was then determined using a Black Scholes model to compute A) the value of the right to convert each Series B share into 5.4397 shares of common stock using Anworth's financial data as of July 1, 2019 as if the common stock dividend was already paid, and B) the value of the right to convert each Series B share into 5.3539 shares of common stock using Anworth's financial data at July 1, 2019 as if the common stock dividend was already paid. The excess of A over B is the value of the increase in the Conversion Rate.

Series B Conversion Ratio (Effective on July 1, 2019)

The conversion ratio formula is as follows:

$$CR1 = CRo + ((\$25 \times (CSY - 6.25\%)) / 4) / SP$$

CR1 = conversion ratio after the change

CRo = conversion ratio immediately preceding the change

SP = the average of the closing sale price per common share over the 10 consecutive trading day period prior to the trading day immediately preceding the earlier of the record date or the ex-dividend date of such excess cash dividend

CSY = annualized common stock dividend yield, calculated as all cash dividends and cash distributions paid to our common stockholders during the fiscal quarter, multiplied by 4, divided by SP

6.25% = Dividend Threshold Amount

2nd Quarter 2019

Common stock dividend paid	\$	0.11
Ex-Dividend Date		June 27, 2019
Record Date		June 28, 2019
